

# What is the Water Environment Industry?

It's people working together to keep our water supplies safe and plentiful.  
The Water Environment Industry includes:

## Drinking Water Treatment Facilities & Distribution Systems

These locate, manage, and clean local water sources using the latest equipment, technologies, and science. Through them, water is supplied to homes, schools, and businesses for consumption and other uses.

## Wastewater Collection & Water Resource Recovery Facilities

Using the latest technologies, equipment, and science, these remove chemicals and pollutants, as well as recover key nutrients and resources from used water. The cleaned water is returned to streams, rivers and lakes or used for irrigation.

## Water Protection Agencies

Operate on a federal, state, and local level to test water for pollutants, protect wetlands and water supplies, as well as enforce regulations.

## Ancillary Organizations

Support and assist the Water Environment Industry through industry specific products, equipment, and services.

The Water Environment Industry needs people to work in all of these areas!
